

Beauty Business Performance Analysis

Project Overview

This project analyzes the sales, expenses, services and profitability of a beauty business using data from when the business commenced in April 2024 to August 2026. The analysis was conducted to understand the financial performance of the business, identify major expense areas, determine which service and periods generate the most revenue, and provide insights that can support better business decisions.

Business Problem

The business has been recording sales making various purchases and expense, which led me to raise questions about:

- Is the business actually generating a profit?
- How are sales changing over time?
- Which months and quarters perform best?
- Which services generate the most revenue?
- Where is most of the business money being spent?
- How have expenses changed over time?
- Which areas could be improved to increase profitability?

Tools Used

- Microsoft Excel/ Google Sheets
- Microsoft Power BI
- DAX
- Data Visualization
- Pivot tables and Explanatory Analysis

Key Findings

Financial performance

- 2024 recorded KSh 588.40K in sales but a KSh 923.02K net loss, largely influenced by the high expenses incurred during the business's early stage.
- In 2025, sales increased to KSh 944.75K, while expenses fell to approximately KSh 614.13K, resulting in a KSh 330.62K net profit and a 35% profit margin.
- The available 2026 data shows KSh 188.3K in sales and KSh 58.59K net profit, with a 31.12% profit margin.

Sales patterns

- In 2024, December recorded the highest sales (KSh 100.70K), while April recorded the lowest.
- In 2025, July recorded the highest sales (KSh 98.60K), while December recorded the lowest.
- In the available 2026 data, May recorded the highest sales (KSh 32.75K), while March recorded the lowest.
- Across the three years combined, July recorded the highest cumulative sales at KSh 179.55K, while February recorded the lowest at KSh 97.05K.

Expense structure

- Furniture and Equipment accounted for approximately 45% of purchases, making initial business establishment a major component of expenditure.
- Salaries and Employee Wages accounted for approximately 30%, highlighting employee-related costs as an important recurring expense.
- The remaining 25% was distributed across other business expenses.

Services

- Tips and Gel-related services were among the strongest revenue-generating services.
- Nail repair and gel change generated relatively low sales compared with the leading services.

Payment methods

- Mobile payments consistently represented the majority of recorded payments: 82.5% in 2024, 90% in 2025 and 87% in the available 2026 data.

Quarterly performance

- Q2 is the strongest quarter in both the annual analysis and Power BI exploration, noting that 2026 data is incomplete.

Key Business Insights

The analysis indicates that the business experienced substantial establishment-related expenditure during its first year. However, financial performance improved significantly in 2025 as sales increased and expenses decreased. The available 2026 data also shows positive profitability, although the year is incomplete.

The analysis suggests that continued monitoring of recurring expenses, high-revenue services, monthly sales patterns, and profitability will be important for future business performance and decision making.

Recommendations

Based on the analysis:

1. Monitor recurring operating expenses regularly.
2. Separate one-time startup costs from recurring business expenses when evaluating ongoing profitability.
3. Continue monitoring high-revenue services such as Tips and Gel-related services.
4. Investigate the factors contributing to strong and weak sales months.
5. Maintain accurate records of mobile and cash payments.
6. Monitor profit margins alongside sales to ensure that revenue growth translates into profitability.
7. Strengthen social media and customer engagement.
8. Encourage clients to follow the business's social media pages and leave reviews.
9. Introduce consistent branding for employees.
10. Use targeted promotions during low sales months.

Analysis and Dashboard Preview

The Data Model.

A Date table was created as a central calendar dimension to support consistent time-based analysis across the dataset, including year, month, and quarter comparisons. The data model below shows the relationships created between the Sales, Expenses, and Date tables.

Figure 1.1 : Data Model

Dashboard

Figure 1.2 shows the interactive dashboard developed to provide insights into the performance of the business. The KPIs at the top provide a quick overview of the business performance, while the year, month, and quarter filters allow users to track performance over different periods and make informed decisions.

Figure 1.2: Dashboard

Below is an example of the insights generated when a selection is made from the filters. In this example, the year 2026 was selected. In cases where comparison between two periods is required, multiple selections can be made within the filter section.

Figure 1.3 : Dashboard

Cleaned Sales data

The table below presents a fraction of the cleaned sales data used for the analysis.
